

# Strongest and Lightest Ladders Known.

Bent rung ladders are ten times as strong as need be, and light as ladders can be made. The sides are of strong, light wood; bent rungs of toughest hickory. No holes in side pieces to weaken them; no wedges driven into the ends of rungs to split the sides. Side pieces are not three times as heavy as they should be in order to overcome weakness due to holes. Each rung acts as a brace between itself and the side. The ladders last a lifetime. In many thousands made and sold in the last three years, so far as known, *not one rung has ever broken.*

## Bent Rung Ladders and Step Ladders

*For Mechanics and Electrical Workers.*

The lightness of these ladders strongly commends them. One man can handle a 24 foot Bent-rung Extension Ladder with ease. They cost no more than the common kind.
